

datango collaborator ensures fast, audit-proof and cost-efficient collaboration in one platform

datango AG: Implementing IT content projects is now more efficient than ever

Berlin, Germany and Westford, MA, USA 7th December, 2011 -

Improving IT efficiency means simplifying the collaboration between all stakeholders, measuring end user progress and managing learning content in an all-in-one platform. All this and more is possible with the datango collaborator! Leveraging the powerful combination of the datango collaborator and producer or instant producer guarantees increased ease-of-use and efficiency. Learning content can be quickly and easily checked in and out as needed, which drastically reduces the risk of errors and allows authors to work more efficiently with measurable results.

The datango collaborator is a centralized work area for the purpose of workflow-supported collaboration. Authors, key users, end users and project managers can access the collaborator simultaneously. By leveraging the datango learning manager and learning reporter, learners can keep an eye on their own learning progress with measurable results. Moreover, the project leader can configure the end users' learning progress to be displayed in numerical or graphical reports as desired.

The level of efficiency can be measured by collecting, analyzing and displaying information on the individual users, organizational units and learning content as well as course assignments. "CIOs and project managers strive to increase ROI and shorten lead time on software rollouts and new releases in order to positively influence the overall costs and reduce investment barriers with respect to new tools and features. Not only the datango collaborator, but also other datango tools can significantly help achieve these high-ranking corporate objectives." states Maik Püschel, Product Manager at datango AG. Transparency and measurability are essential prerequisites to reach such goals. The learning progress is therefore made fully transparent to the learners and project leaders, internal processes are accelerated measurably – and in particular when

the collaborator is used in combination with the producer. By doing so, creating and managing lessons becomes as easy as 1-2-3, which significantly increases efficiency overall.

The collaborator in action

“The collaborator offers workflow-based teams and end users speed, efficiency and auditability.”, explains Maik Püschel. This paves the way for shorter lead times and increased ROI. For example, should employees need to be trained on a new application or version, the necessary learning content can be quickly and easily created in a variety of ways. Authors can create all the content themselves or leverage the instant producer, which allows colleagues or external consultants to record application processes with absolutely no training required.”, adds Püschel.

The learning content is stored in the collaborator, no matter how many authors there are or where they are located geographically. Verifying the content can also be done directly in the collaborator for quality management purposes. Once the learning content has been approved, end users, which, in this case, are the learners, can be assigned lessons via the datango learning manager. The datango learning reporter ensures that the learning progress of each individual learner is transparent, easily comprehensible and measurable, and can be displayed as desired at any time. In addition, any changes or updates made to the learning content are automatically applied so that the lessons always remain up-to-date.

Increase your efficiency curve with global teams

“Thanks to the collaborator, content projects can be optimally implemented in terms of time, resources and cost,” says Maik Püschel. “The collaborator eliminates communication gaps between team members no matter where they are located around the globe. This efficient collaboration makes it all that much easier to create and manage learning content together.” Content lifecycle management and knowledge transfer are thus optimally combined into one platform. The benefits: streamlined workflows, efficient leveraging of the deployed systems and increased productivity of all stakeholders.

About datango:

datango AG, founded in 1999 and headquartered in Berlin with offices in Europe and the Americas, provides software solutions that accelerate time-to-value and mitigate the risk of end user failure for mission-critical enterprise applications.

Profitable since 2004 and with the support of Hasso Plattner Ventures and EXTOREL since 2006, datango took over the "Knowledge and Performance Solutions" business unit of the Swedish company Enlight AB in 2007. datango now has more than 1,000 clients, millions of users and successful partnerships with leading system integration and enterprise software companies globally.
